Guideline for Pre-Admission Rehabilitative Care Processes: Primary, Elective, Unilateral Total Joint Replacement

1 Introduction:

The GTA Rehab Network developed an outpatient rehab model of care in 2013 based on evidence in the literature and consensus among clinical experts within the GTA Rehab Network. In March 2017 (Rev Jan 2018), the Rehabilitative Care Alliance released the Rehabilitative Care Best Practice Framework for Patients with Primary Hip and Knee Replacements, which outlines recommendations for post-operative rehabilitative care. The RCA’s framework reflects the latest research evidence and was developed with input from clinicians and stakeholders across the province, including the GTA Rehab Network.

The GTA Rehab Network has reviewed the RCA framework and updated its TJR Outpatient Model of Rehabilitative Care as applicable.

2 TJR Outpatient Model of Rehabilitative Care

Evidence indicates that the majority of patients can achieve comparable outcomes in community based rehabilitation post primary, unilateral hip/knee replacement versus inpatient rehabilitation provided that adequate therapy resources are available in a timely manner. The Quality-Based Procedures Clinical Handbooks for Primary Unilateral Total Knee and Total Hip Replacement set out the following targets for discharge disposition and length of acute care stay as identified by the Orthopaedic Expert Panel:

- Discharge disposition – 90 per cent home;
- Length of stay – mean 4.4 days for patients discharged home

Early planning and education with patients in the pre-admission phase is a critical step in preparing patients for their surgery and discharge to home by day 4 post-op. Recognizing that each organization will implement processes in the pre-admission process in accordance with patient needs and available resources, the components recommended in this guideline reflect ideal approaches for consideration to support achievement of the discharge targets.

The GTA Rehab Network has also outlined components of the TJR Outpatient Rehab Model along with separate process maps for Total Knee and Total Hip Replacements that schematically describe the processes that are recommended to occur in the Pre-Operative Phase, Acute Admission Phase and the Outpatient Rehab phase.
3 Key Elements in the Pre-admission Process

3.1 Pre-operative Education

Pre-operative education is an important component to inform patients of all aspects of their care and what to expect at each stage from referral, through admission, surgery, post-surgery and return to the community.4

There is a greater need for pre-operative education that is provided from a rehab perspective in light of the direction to discharge the majority of patients directly home from acute care.

Education should be provided using a variety of media to accommodate differences in learning styles among patients and include opportunity for discussion/questions. 5

Ideally pre-operative education should be offered 6-8 weeks before the date of surgery.6,7 While education has been typically offered on the same day as the medical pre-op visit, earlier education with patients has three important benefits:

a) Patients have more time to prepare for the discharge to home from acute care, including mobilization of family, friends or other community resources to support a safe discharge home.

b) Patients can begin to do exercises to improve strength and fitness in advance of the surgery and support post-surgical recovery.8

c) Patients are provided with information on the model of care for outpatient rehab that they will receive after their total hip or total knee replacement. For patients undergoing total hip replacement and where the amount of physiotherapy that will be required post-surgery may be unclear, it is important to clearly state to the patient that s/he will be referred to a physiotherapist in outpatient rehab who will assess the patient’s need for additional rehab following the initial assessment/class.

Length of class:
• Up to 1 ½ hours. Organizations that have been running classes have found that 1 ½ hours allows enough time to provide information and address questions.

Class Instructors:
• The class should be co-led by regulated rehab professionals, ideally by one occupational therapist and one physiotherapist, who can respond to the broad range of questions that patients may pose.
The class could also be co-led by one physiotherapist or occupational therapist and one rehab therapy assistant.

At a minimum, the class could be led by a rehab therapy assistant alone provided that (i) the rehab assistant has the appropriate knowledge and training (i.e. Certified OT/PT Assistant graduated from a Ministry of Colleges and Universities approved Community College) and (ii) the occupational therapist and physiotherapist are available for consultation to address any questions outside of the rehab assistant’s level of expertise.

It can be helpful to have a patient who has already undergone the surgery to participate in the information sharing part of the class.

Class Content:

- Information on the acute care stay and expected length of stay
- Information on preparing for a discharge to home by day 4 post-op (e.g. home safety, equipment needs, arranging for help with meal planning/preparation for 9 days and other household chores, daily phone contact with someone (friend, family member) to report daily status and follow up on exercises etc.).
- Information on the recovery process (e.g., Precautions and joint protection post-operatively, energy conservation and pain management techniques)
- Exercise, functional activities, ADLs (Toileting, dressing, bathing, car transfers, homemaking, bed transfers, stairs).
- Increased functional endurance and return to work/sports.
- A standardized information package that is written in plain language.
- Education on health promotion, disease prevention and lifestyle changes or other factors that may adversely affect outcomes (e.g., obesity, lack of exercise, smoking etc.).

Pre-operative Medical Workup:
Patients are seen before the date of surgery for medical screening to determine appropriateness and fitness for surgery by the clinical team, which may include an RN, anaesthetist and other consultation services. Blood work and other tests are done as needed.

### 3.2 Discharge Destination Triage

At the pre-operative medical visit, the patient is also assessed to confirm the discharge destination of the patient post-surgery. While the target for discharge to home from acute care has been set at 90% for patients, there are some patients who will likely require inpatient rehabilitation.

The triage assessment should be conducted by an individual with a rehabilitation, social work or nursing background. However, it is recommended that members of the MSK clinical team be available for consultation to pre-empt and resolve any potential rehabilitation or psychosocial barriers that could delay discharge or preclude a discharge to home.
To conduct the triage, see Appendix A: “Discharge Triage Considerations for Patients Following Primary, Unilateral, and Elective Hip/Knee Replacement.”

### 3.3 Referral to Post Acute Rehabilitation following Triage Decision

**a)** For the majority of patients who are expected to be discharged home post surgery, a referral to outpatient rehab is initiated in the pre-admission phase:

- For a listing of a TJR outpatient rehab programs in the GTA that accept external referrals see Appendix B: “TJR Outpatient Rehab Programs in the GTA Accepting External Referrals.”
- Referral for the first outpatient rehab appointment for patients who will receive a total knee replacement is based on the date of surgery and anticipated date of discharge on day 4 post-op or earlier. The tentative date of the 1st appointment is within 7 days of the projected discharge date from acute care or Home and Community Care (if patient is expected to require Home and Community Care post discharge.)
- The date of the 1st appointment for outpatient rehab, if required, for patients who will receive a total hip replacement is typically scheduled to occur between 2-6 weeks post discharge.
- Mechanisms should be in place to communicate the date of the outpatient rehab appointment to the patient and inpatient acute care team; appointment to be confirmed by the inpatient team prior to the patient’s discharge from acute care.
- Transportation options for outpatient rehab are discussed and provided to the patient including LHIN-subsidized programs. (See Appendix C for a list of GTA LHIN funded programs)
- A standardized outpatient rehab referral form has been developed: “Outpatient Rehab Referral Form: Elective Knee or Hip Replacement.” (See Appendix D)

**b)** The following schematic outlines key components to support the referral process and reduce the risk of a breakdown in the referral process:

---

**Table: Strengthening Acute Care / OPR Communication and Referral Follow Up for TJR OPR Referrals**

<table>
<thead>
<tr>
<th>Ensure early referral to OPR</th>
<th>Establish acute care key referral contact</th>
<th>Monitor Referral Responses</th>
<th>Provide follow up for declined referrals</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Send referral in pre-op phase at least 4-6 weeks in advance of surgery so that OPR can be arranged within the recommended timeline.</td>
<td>• Point of contact for OPR re: status of referral</td>
<td>• Acute care to monitor RM&amp;R referral responses and paper-based referrals to determine if referral is declined</td>
<td>• Acute care to contact patient to determine other OPR referral options and submit referral as applicable</td>
</tr>
</tbody>
</table>

*To be considered in conjunction with the recommendations in the GTA Rehab Network’s Guideline for Pre-admission TJR Rehab Processes and the Outpatient Rehab Process Maps for Total Knee and Total Hip Replacements.
c) A very small proportion of patients may qualify for rehabilitation services from Home and Community Care. Eligibility criteria for patients who may require Home and Community Care are outlined in Appendix E.

d) For patients who will likely require inpatient rehabilitation, the “Rehab Pre-Admission Form: Elective Hip and Knee Surgery” can be completed to provide an initial notification to an inpatient rehab program of a potential need for admission of a patient from acute care due to the complexity of a patient’s needs. The use of this form does not reserve an inpatient bed for the patient. (See Appendix F)
4 APPENDIX

4.1 Appendix A: Discharge Triage Considerations for Patients Following Elective Hip/Knee Replacement

The first and foremost consideration when planning for discharge is to explore with the patient every option to support discharge to home.

The triage assessment should be conducted by an individual with a rehabilitation or nursing background. However, it is recommended that members of the MSK clinical team be available for consultation to pre-empt and resolve any potential rehabilitation or psychosocial barriers that could delay discharge or preclude a discharge to home.

REFERRAL TO OUTPATIENT REHAB OR HOME AND COMMUNITY CARE REHAB:
All patients who do not meet the criteria for inpatient rehab as outlined below are appropriate for community-based rehabilitation upon discharge from acute care.

Determination of outpatient rehab versus a referral to Home and Community Care is based on the following considerations:
- Patients who are able to access outpatient rehabilitation are to be referred to an outpatient clinic or private provider.
- Patients who are home-bound and unable to access rehabilitation outside the home (Refer to Home and Community Care Admission criteria in Appendix E)

REFERRAL TO INPATIENT REHAB:
Discharge to inpatient rehab should only be considered where there is a combination of concerns in the following areas that precludes a safe discharge to the community:

1. **Overall Functioning/Mobility:**
   - Does the patient have poor pre-operative function as demonstrated by any of the following:
     » The requirement for significant family support or formal community support services
     » Limitations in upper extremities that can impact post-op recovery in the community (particularly in cases where there will be weight bearing restrictions)
   - Is there insufficient strength/tolerance in the non-operative leg to support the patient’s post-op recovery in the community?
   - Is the patient limited in his/her ability to understand information provided?

2. **Post-op Risk:**
   - Is the patient at high risk of developing postoperative complications that may require regular monitoring by healthcare providers?  

3. **Environmental Factors:**
   - Are there any barriers in the home environment that cannot be modified to support a safe discharge home (e.g. stairs; bathroom set-up; type of home)?
   - Is the patient’s need for support post-op anticipated to exceed what is currently available through informal or formal community resources to support a safe discharge to home?

### 4.2 Appendix D: Outpatient Rehab Referral Form – Elective Knee or Hip Replacement

This Outpatient Rehab Referral Form is for scheduling post-surgery outpatient rehab (OPR). It may be submitted pre-operatively or post-operatively to only 1 organization for OPR. The pre-op referral form is not to be used for scheduling pre-surgery education or pre-surgery rehab. Not all OPR programs accept referrals pre-operatively. See Appendix A for a listing of TJR OPR programs.

**Required for Referral Process:**
1. **OPR** to contact patient within 4 business days of receipt of referral and provide appointment date to patient.
2. **OPR** to notify Acute Care within 4 business days if date of 1st OPR appointment is beyond requested timeframe. (See below)

**Acute Care to:**
1. Acute care to notify OPR if change in surgery date or care plan.

**Required Post-Operatively:**
1. **Acute care** to confirm OPR appointment with patient and/or OPR program.
2. **Acute care** to send to OPR: A discharge summary note that includes relevant post-op information (PT and/or MD note) and discharge date; treatment restrictions; a discharge medication list (preferred); date of follow-up appointment

4.3 Appendix E: Referral to the Central, Central East, Central West, Mississauga Halton and Toronto Central Home and Community Care for Rehabilitation Services for Hips and Knees

- All clients should be referred to outpatient clinics for rehabilitation services (i.e. Physiotherapy) unless they are home-bound due to overall functional status and/or underlying medical condition that would compromise their health status.

- Home bound does not include those that cannot access transportation to access outpatient services. Ability to access transportation does not make someone eligible for Home and Community Care services.

- Clients receiving rehabilitation in an outpatient clinic are not excluded from receiving an assessment for other Home and Community Care services (i.e. PSW, case management)
## 4.4 Appendix F: Rehab Preadmission Form Elective Hip and Knee Surgery – Replacements and Revisions

Indicate risk factors that preclude safe discharge to community and necessitate inpatient rehab:

<table>
<thead>
<tr>
<th>Patient: Last name</th>
<th>First name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Health Card: Number</td>
<td>Version: Date of Birth: Y/ M/ D/</td>
</tr>
<tr>
<td>Gender: Male</td>
<td>Female Height: Unknown</td>
</tr>
<tr>
<td>Address: City Postal Code</td>
<td></td>
</tr>
<tr>
<td>Home Phone Number:</td>
<td>Accommodation Requested: Standard</td>
</tr>
<tr>
<td>Insurance Company: Policy Certificate/group #:</td>
<td></td>
</tr>
<tr>
<td>Next of Kin/Emergency Contact: Name: Telephone:</td>
<td></td>
</tr>
</tbody>
</table>

### Current Surgical Intervention:

</table>

### Living Setting:

- Prehospital: home | community | facility |
- Discharge: home | community | facility |

### Past and relevant history:

- Psychiatric: Unknown | No | Yes (specify) |
- Medical: Unknown | No | Yes (specify) |
- Surgical: Unknown | No | Yes (specify) Y/ _____ M/_____ D/_____ |

### Other Notes:

- Date of Surgery: Y/ ______ M/__________ D/__________ Date Unknown
- Date of Referral: Y/ ______ M/__________ D/__________ Date Unknown
- Date Ready for Rehab/Self-Care: Y/ ______ M/__________ D/__________ Date Unknown

### Physician/specialists involved in care of patient:

- Name: Specialty: Phone: (    )
- Name: Specialty: Phone: (    )
- Name: Specialty: Phone: (    )

Contact person & Position: Pager: (    )
Endnotes

4 Ibid.

6 If the wait time from the patient’s first consult with the orthopaedic surgeon to date of surgery is shorter than 6 weeks, pre-operative education should be provided as early as possible following the first consult to provide enough time for the patient to prepare for surgery and discharge home.

8 Authors of a randomized control trial reported: “Our findings suggest that the key to successful early discharge of THR patients may be adequate preoperative education, exercise and training in the use of devices for assistance, and also rehearsal of postoperative physical exercise.” Siggeirsdottir, K., Olafsson, O., Jonsson Jr., H., Iwarsson, S., Gudnason, V. and Jonsson, B. Y. (2005). Short hospital stay augmented with education and home-based rehabilitation improves function and quality of life after hip replacement. Acta Orthopaedica,76(4), 555-562.
